

Martin Bialluch

Ausstrahlungswirkungen im Unternehmensrecht

[Spillover Effects in Corporate Law.]

Published in German.

This volume deals with the concept of so-called spillover effects in current legal discourse. But what do jurists mean when they talk of spillover effects? To find out, Martin Bialluch's main focus is on fundamental theoretical legal research in the field of methodology. Based on extensive observations in the fields of company transformation law and capital market law, he explains why, for the purposes of methodology, the term must be understood as a mere linguistic illustration of the results of certain forms of legal argumentation and as a collective term for certain legal states claimed in the legal sciences. Following the scientific imperative of parsimony, the work refuses to acknowledge spillover effects as a new type of doctrine in legal methodology.

Martin Bialluch ist Wissenschaftlicher Assistent am Max-Planck-Institut für ausländisches und internationales Privatrecht in Hamburg.
