

Rationalität im Prozess kultureller Evolution

Rationalitätsunterstellungen als eine Bedingung der Möglichkeit substantieller Rationalität des Handelns Hrsg. v. Hansjörg Siegenthaler

[Rationality in the Process of Cultural Evolution. Presumptions of Rationality as a Requirement for Potential Substantive Rationality of Action.]

Published in German.

The authors of this volume investigate conditions of substantive rationality as well as the heuristic significance of rationality presumptions, which is the attribution of general overall consistence to the deeds and words of our fellow human beings. The authors, distinguished representatives of their fields, draw upon the newest research results in economics, social sciences and humanities, to which they themselves have also made successful contributions. In combining their different perspectives, they provide new insights into the substantial contribution which a culture of rationality presumptions is likely to make to the evolution of substantive rationality itself.
