Published in German.

One of the most important phases in later European philosophy in Germany was the period of development from Kant to Hegel (1770–1830), which was closely bound up with the poetry and teaching of Goethe's times. Richard Kroner gives a comprehensive account of the views of the individual philosophers and the links between their systems. Beginning with the cognition of Kant, he depicts German philosophy of the classical period in the whole range of its thought and with all its varied answers to the spiritual questions which mankind is forever asking.
